

PHP task

Goal: Create an order management service based on integration with an external product system.

User functionalities:

- Ability to make orders based on a product database available at <https://fakestoreapi.com>
- Ability to cancel (delete) orders
- Ability to recreate an order based on a previously created order

Tech stack:

- PHP 7.4+
- Symfony 4/5
- Composer
- Git

The implementation can be done in any form, such as a set of API endpoints or a simple user interface.

Information and tips:

- Initiative and creativity in developing the solution will be appreciated
- Provide a basic readme file
- Add unit tests

Have fun and happy coding!
